## SCP SERIES Centrifugal Pool Pumps

**SunPumps** SC series centrifugal surface pumps are high quality, DC powered pumps designed specifically for water delivery in remote locations.

They operate on 100 to 2000 watts of DC power from 30 to 180 volts. The power may be supplied from a variety of independent sources including solar modules, wind generators, batteries charged by solar modules.

**SunPumps** SC series centrifugal pumps are equipped with heavy duty permanent magnet, DC motors with long-life brushes. The motors are close-coupled to the pump end thus eliminating the need for base plates, belts and pulleys.

The SCP series pumps are single stage centrifugal type constructed from high performance thermoplastic. They are extremely resistant to mineral and algae deposits while providing outstanding strength and durability. For added protection, a basket strainer is incorporated into the suction side of the pump. Simplicity is a key feature of the SCP series pumps. They are simple to install and field servicing is easily accomplished without the use of specialized tools.

**SunPumps** SCP series pumps can be installed above the water level in a lake, river cistern or in a swimming pool. They can be used to fill open tanks, aerate ponds, circulate water for aqua culture, irrigate small farms or for swimming pool filtration.

**SunPumps** SCB series pumps are designed for use in stand alone water delivery systems. They are pollution-free, corrosion-free, self-lubricating and quiet. There is no better way to provide water for remote homes, villages, small farms as well as many other needs beyond grid power.
